

Assignment

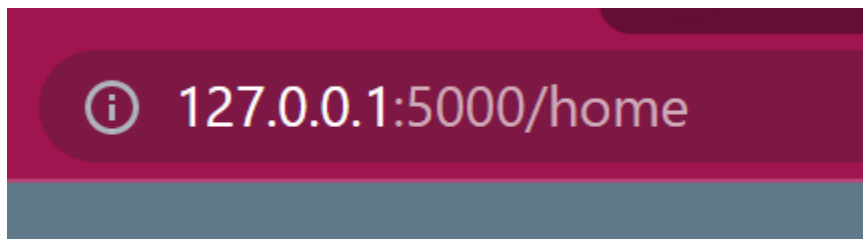

Develop a flask-based app that allows users to create blogs. This includes the ability for users to create accounts, login and post blogs. Design the blog post and edit pages using your own imagination.

The following steps are outlined for users:

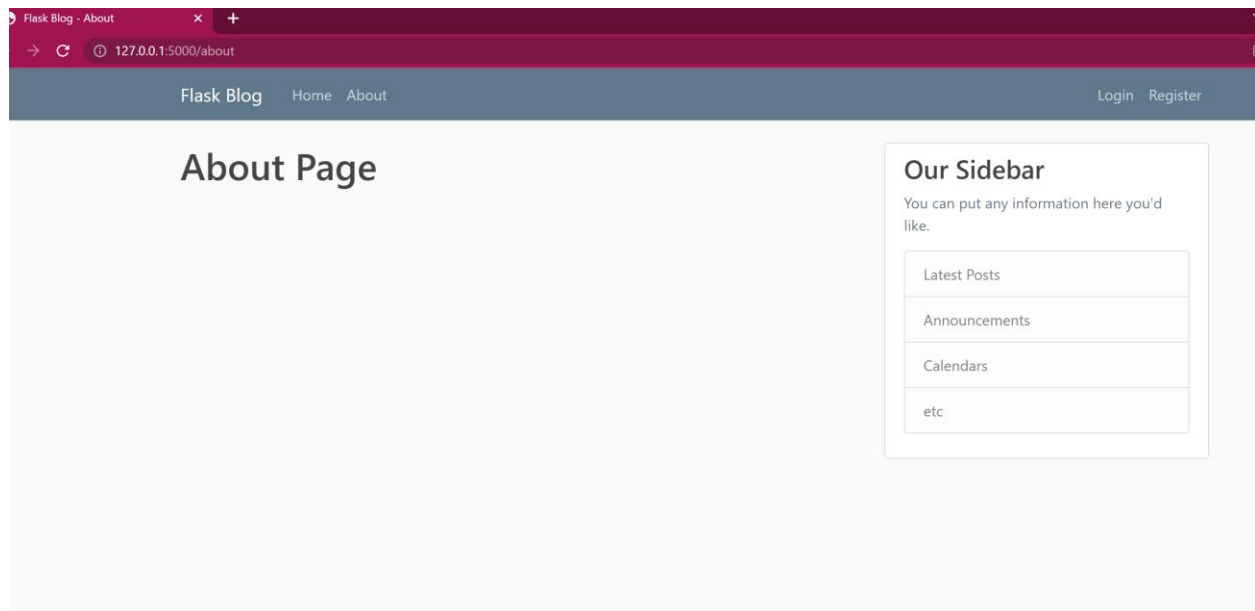

1. Default webpage should look something like this. Good if you carry the same header across all pages.

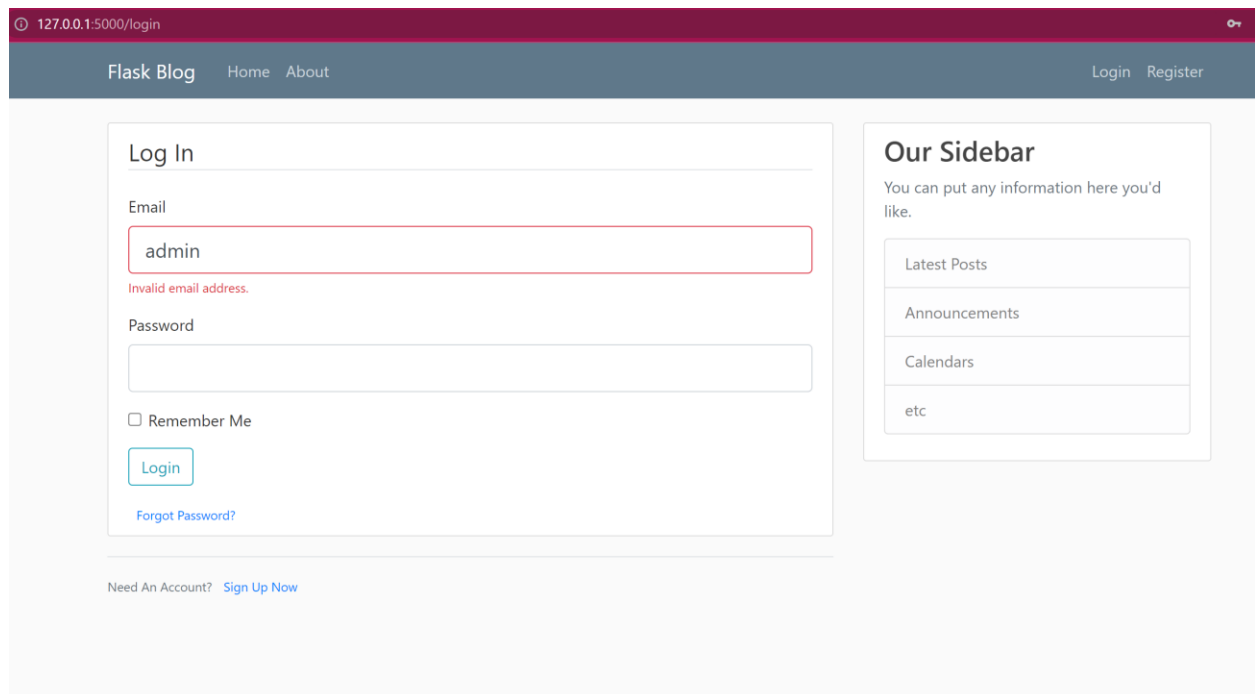

2. home page should point to default page.

2. About link should navigate to the following about page.

Login page, all fields should do the needed validation

All users should be able to register If they click the Register link and fill the appropriate fields.You can use a local db file or external database for it using sqlalchemy (or)sqlite packages.
